PROFESSIONAL SUMMARY

Dynamics 365 CE & Power Platform Developer with 2 years of experience building and deploying enterprise solutions. Hands-on with C# plugins, Custom APIs (Unbound Actions), Dataverse Web API, Model-Driven and Canvas Apps, Power Automate and Azure integrations. Experienced in ALM using Azure DevOps across Dev, Test and Production environments, and in delivering a US Federal document-generation project.

CORE TECHNICAL SKILLS

Dynamics 365 CE & Development: C# Plugins (Pre/Post-Operation, Sync/Async), Custom APIs & Unbound Actions, Dataverse Web API (OData), XRM SDK, JavaScript, TypeScript, FetchXML, Plugin Registration Tool, XrmToolBox

Power Platform: Power Apps (Model-Driven & Canvas), Power Fx, Power Automate, Dataverse, Business Process Flows, Business Rules, Copilot Studio, AI Builder

Model-Driven App Configuration: Forms, Views, Dashboards, Reports (SSRS & FetchXML), Sitemap, Security Roles, Field-Level Security, Managed/Unmanaged Solutions

ALM & Azure: Azure DevOps (Repos, Pipelines), Environment Variables, Connection References, Configuration Migration Tool, Azure Active Directory, SharePoint Online

Database & Tools: SQL Server, Dataverse SQL, REST APIs, JSON, Postman, Git, Plugin Trace Logs, Agile/Scrum

Additional / Working Knowledge: PCF Controls, React.js, Node.js, HTML5, CSS3, Claude AI Integration (MCP)

PROFESSIONAL EXPERIENCE

MS Dynamics 365 / Power Platform Developer

PiSquare Technologies, Hyderabad, India | Oct 2024 – Present

- Engineered 8+ C# server-side plugins and JavaScript/TypeScript web resources to enforce core business logic, handle asynchronous event execution and validate cross-entity rules.
- Built multi-step Custom APIs (Unbound Actions) using FetchXML and Dataverse Web API, consumed by Power Automate flows for complex data retrieval across related tables.
- Designed reusable Model-Driven and Canvas Apps on Dataverse, translating business requirements into scalable solutions in collaboration with cross-functional teams.
- Managed 10+ solution deployments across 3 environments (Dev, Test, Production) using Azure DevOps, with environment variables and connection references to handle configuration differences between environments, and the Configuration Migration Tool.
- Developed automated workflows, BPF stage transitions and notification systems using Power Automate.
- Integrated Copilot Studio virtual agents with Dataverse and automated document extraction using AI Builder.

KEY PROJECTS

US Federal Document Generation System | Custom API & Power Automate | Mar 2025 – Present

- Designed a Custom Unbound Action API (C#), called from Power Automate using "Perform an Unbound Action", that accepts a single record ID as input.
- Implemented multi-level data traversal in C# (starting record to related table to further related tables) across 100 tables, using FetchXML directly where suitable and retrieval logic elsewhere.
- Returned a structured payload to Power Automate and populated Word templates, auto-generating compliant, formatted documents directly from Dataverse records and reducing manual document preparation effort by ~60%.
- Ensured accurate data binding between CRM entities and template placeholders, delivering audit-ready output for a US Federal capability project.

Technologies: Dynamics 365 Custom API (C#), Power Automate, FetchXML, Word Templates, Dataverse

Employee Management System | Canvas App, Power Automate & SharePoint | Jun 2025 – Present

- Built responsive Canvas App screens using containers, components and Power Fx (Patch, LookUp, Filter, SortByColumns).
- Created Power Automate flows for employee report generation, PDF export and SharePoint synchronization, implementing SharePoint pagination to handle 5,000+ records.
- Implemented role-based access with separate screens for Admin and HR users; integrated Azure AD with SharePoint to auto-create records for new users.

Technologies: Canvas Apps, Dataverse, Power Automate, SharePoint, Azure Active Directory

HubSpot to Dynamics 365 CRM Migration | Mar 2025 – Jul 2025

- Migrated 5,000+ CRM records and related processes from HubSpot to Dynamics 365 across 4 core entities (Accounts, Contacts, Leads, Opportunities), preserving relational integrity.
- Built custom tables, forms, views and dashboards; customized Business Process Flows with automated stage movement through Power Automate.
- Wrote client-side JavaScript for form validation, field visibility and dynamic input control; built custom subgrids using Web Resources.
- Handled solution export/import across environments and configured security roles for controlled data access.

Technologies: Model-Driven Apps, Dataverse, Power Automate, FetchXML, JavaScript, Web Resources, BPF

EDUCATION

B.Tech in Computer Science & Engineering – CGPA: 8.5
Narasaraopeta Engineering College | Jan 2020 – Aug 2024

CERTIFICATIONS

- Microsoft PL-400: Power Platform Developer Associate – Preparing (exam not yet taken)
- Oracle SQL; NPTEL – Joy of Computing Using Python
